Re: Snot-A-Rator Nasal Aspirator

Dear Ms. Halter,

Thank you for the recent gift to me and my staff of your new product the Snot-A-Rator Nasal Aspirator and letting me and my staff evaluate the product at our home with our family's infants and toddlers.

As you are well aware the colds of infants and toddlers are often difficult to treat because very young children can not blow their noses. After trying and using the Snot-A-Rator at home with our own children, I am happy to write and offer you a letter of recommendation. I have used the Snot-A-Rator when my children are congested and can highly recommend it to parents as part of their cold regimen.

The Snot-A-Rator nasal aspirator is designed to protect delicate nasal mucosa in children because it is placed against the nostril rather than inserted into it. Using this non-invasive device can quickly reduce secretion stagnation in the nose which in turn facilitates the sleeping problems associated with colds in small children.

I wish you and your new product the best of luck!
